SUMMARY

Backend Developer focused on building scalable and high-performance systems with Django and DRF. Experienced in asynchronous architectures, caching strategies, and real-time applications using Redis, Celery, and WebSockets.

PROJECTS

Publisher Statistics Service – Open Source Contribution,

Tech Stack: Django, Django Ninja, Redis, Celery, PostgreSQL

- GitHub: [GitHub: https://github.com/ltqan-community/cms-backend/pull/257](https://github.com/ltqan-community/cms-backend/pull/257) 🔗
- Engineered a scalable statistics endpoint for aggregated publisher data, improving response efficiency under repeated access
- Implemented Redis-based caching, reducing average response time from ~400ms to ~120ms and significantly lowering database query load
- Designed asynchronous processing pipeline using Celery and Celery Beat for scheduled background tasks
- Ensured data consistency through event-driven cache invalidation using Django signals
- Wrote unit tests to validate caching logic, data correctness, and access control

E-Commerce REST API, Django 6 | DRF | PostgreSQL | Redis | Celery | JWT | Docker

- GitHub: github.com/codekat123/E-commerce_API 🔗
- Designed and developed 25+ RESTful API endpoints covering products, cart, orders, wallet, and user management
- Built JWT-based authentication system with custom user model and role-based access control
- Integrated Redis caching to optimize frequently accessed endpoints, reducing response times by ~50%
- Offloaded background operations (notifications, order processing) to Celery, reducing API blocking time from ~2s to <200ms
- Implemented Stripe payment integration with webhook handling for secure wallet transactions
- Containerized the application using Docker Compose for consistent development and deployment environments
- Configured containerized development using Docker and Docker Compose with PostgreSQL and Redis services.

WhatsApp Clone (Real-Time Chat App), Django DRF Channels WebSockets PostgreSQL JWT Docker

- GitHub: github.com/codekat123/WhatsApp-clone 🔗
- Built real-time messaging system using Django Channels and WebSockets, supporting 100+ concurrent connections
- Implemented OTP-based authentication and JWT authorization for secure user sessions
- Designed group chat system with role-based permissions (admin/user)
- Optimized message delivery latency through persistent WebSocket connections
- Containerized application using Docker and documented APIs with Swagger/OpenAPI

Online Learning Platform (Coursera-like), Django 5 DRF PostgreSQL Redis Celery JWT PayPal SDK

- Github : github.com/codekat123/Coursera_clone 🔗
- Developed modular backend system supporting course management, user roles (students/instructors), and content delivery
- Built secure JWT authentication and authorization system for multi-role access
- Integrated PayPal payment workflow (order creation and capture) for course purchases

- Applied Redis caching to improve performance of course listing and retrieval endpoints
- Structured project using clean, modular architecture to improve scalability and maintainability

SKILLS

Backend & Core Technologies

- Django 5, Django REST Framework
- JWT Authentication (SimpleJWT)
- Django Channels (WebSockets)
- Celery & Redis (async tasks, caching)
- RESTful API Design
- Clean Architecture & Modular Apps

Frontend

- HTML
- CSS

Databases

- PostgreSQL
- MySQL
- SQLite
- Redis
- MongoDB

Programming

- Python
- C
- C++

Tools & DevOps

- Docker
- Git & GitHub
- Postman
- Linux
- Swagger / OpenAPI
- Unit Testing
- NGINX
- AWS

Core Programming Concepts

- OOP
- design pattern
- solid principle

Professional Experience

DIGITOPIA (AI & Software Competition) MCIT - Ministry of Communications & Information Technology

- link : drive.google.com/file/d/1_LjX_G2NFVymmLlFVMOcVBMwJK_vRXI9/view?usp=sharing 
- Collaborated with cross-functional team members during a competitive tech environment.
- demonstrated soft skills, including teamwork, adaptability, and effective communication.
- Gained experience working under pressure while meeting deadlines and shared objectives.
- Enhanced ability to contribute in a corporate-style team setting.

CIS Team MU – Django Backend Circle

- link : drive.google.com/file/d/1cx6Q_An38_CD7ccc3843tKZC8B9urfal/view?usp=drive_link 
- Recognized as a Top Member for outstanding performance and dedication in the Django Backend circle.
- Collaborated with backend team members to build and debug APIs and backend services.
- Strengthened practical skills in backend development, problem-solving, and debugging.
- Demonstrated consistency, teamwork, and commitment in a structured technical team environment.

LANGUAGES

Arabic

Native

English

Upper-Intermediate

EDUCATION

Bachelor's in Management Information Systems, *Mansoura Higher Institute*
